

Test Strategy for Ship Class:

There are five attributes in Ship class. shipName is String type and xPos,yPos,noOfHitsMade & noOfHitsNeeded these four are int type. In default constructor, no values are added.

Test 1

With Default Constructor

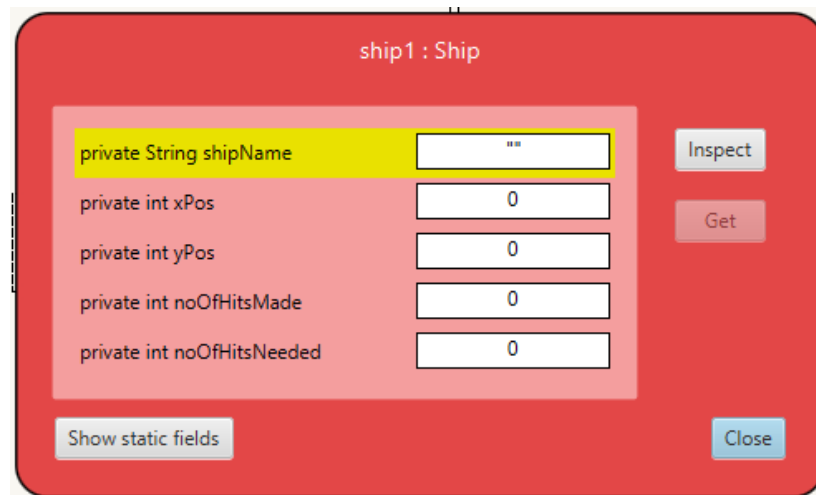

Test Data:

- No Data

Expected Results:

- shipName: “ ”
- xPos: 0
- yPos: 0
- noOfHitsMade: 0
- noOfHitsNeeded: 0

Actual Results:

We can see that, expected and actual results are same.

With Non-default constructor:

Test Data:

- * shipName: “ Indiana”
- * xPos: 3
- yPos: 5
- noOfHitsMade: 2
- noOfHitsNeeded: 5

Expected Rersults:

- shipName: “Indiana”
- xPos: 3
- yPos: 5
- noOfHitsMade: 2
- noOfHitsNeeded: 5

Actual Results:

ship2 : Ship

private String shipName	<input type="text" value="Indiana"/>	Inspect
private int xPos	<input type="text" value="3"/>	Get
private int yPos	<input type="text" value="5"/>	
private int noOfHitsMade	<input type="text" value="2"/>	
private int noOfHitsNeeded	<input type="text" value="5"/>	

Show static fields Close

We can see that,expected and actual results are same.

Negative Test:

Test 2

Test Data:

- shipName: 1
- xPos: "a"
- yPos: "b"
- noOfHitsMade: "c"
- noOfHitsNeeded: "d"

As it can not find the given Symbol,object can not be added.

BlueJ: Create Object

Ship(String newShipName, int newXPos, int newYPos, int newNoOfHitsMade, int newNoOfHitsNeeded)

Name of Instance:

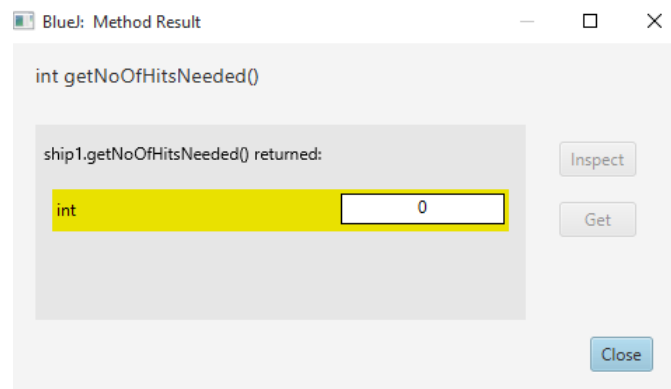

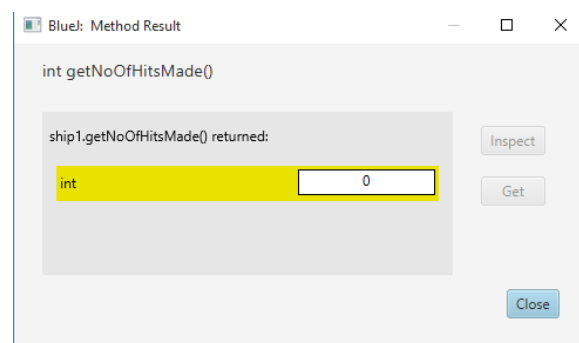

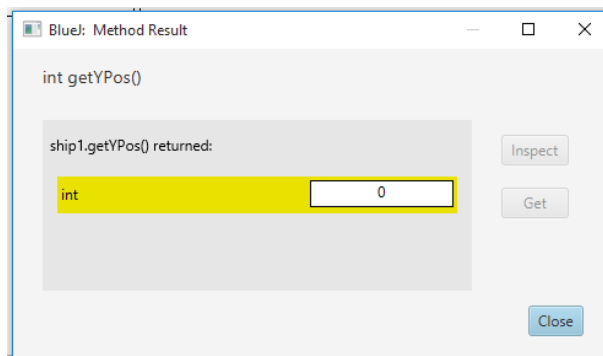

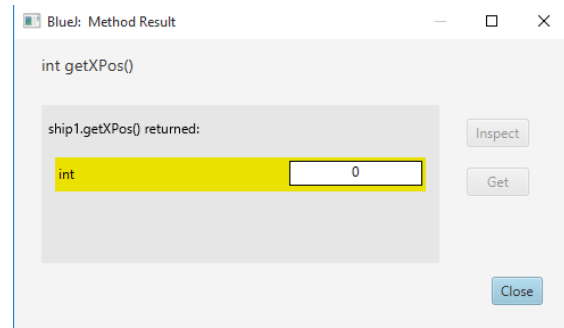

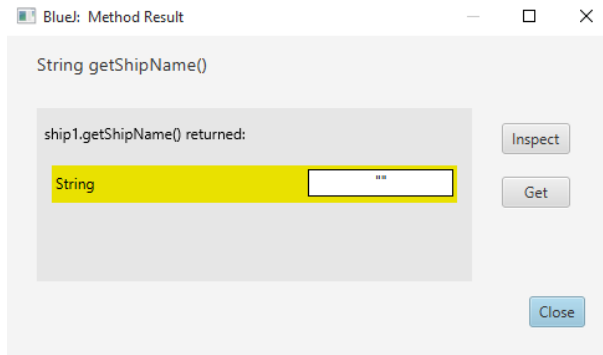

new Ship(,
 ,
 ,
 ,
)

Error: cannot find symbol - variable a

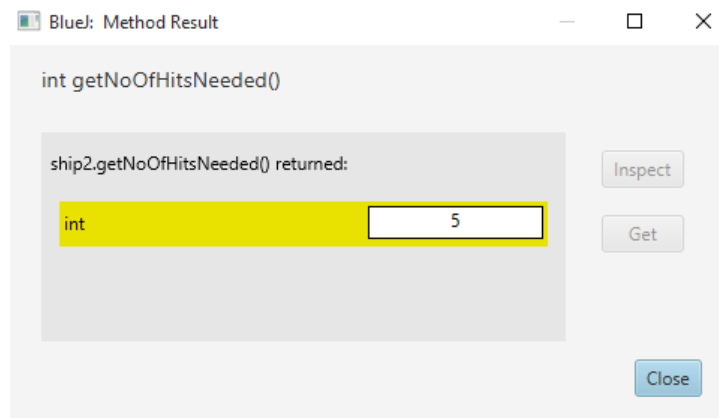

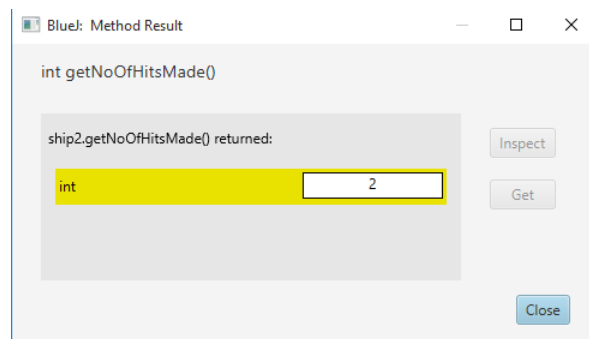

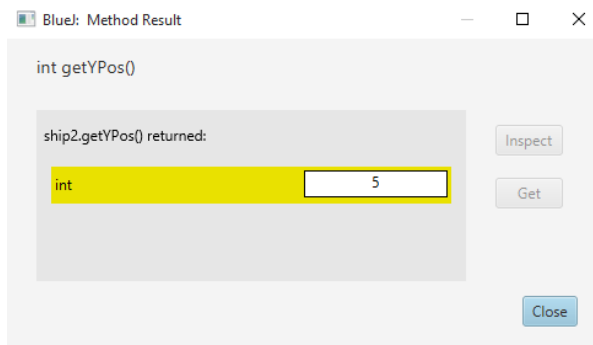

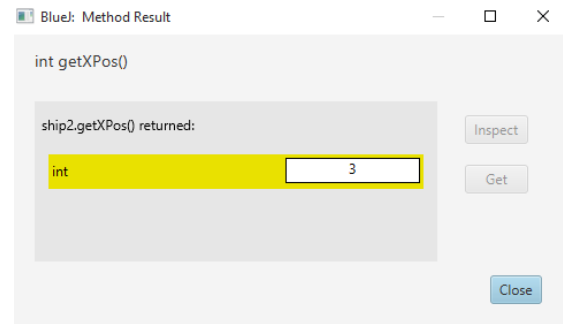

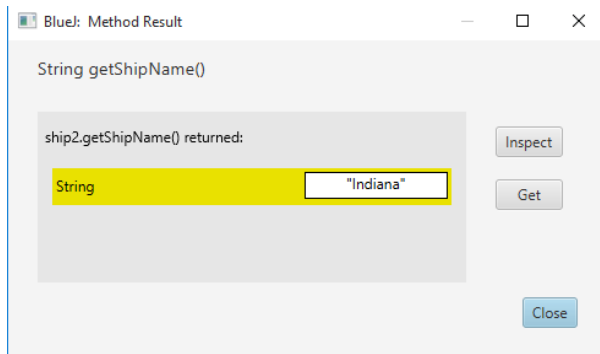

OK Cancel

Test 3

For negative test,as no attributes are being added, get() method will be Zero(0).

When the positive tests are done, then all the attributes are added.

Test 4

In negative test, while working with set() method, it will show error.
